Deepak Aatresh
Founder

Deepak is the founder and visionary behind Aditazz. His idea to borrow and learn from integrated circuit and chip design technologies was the impetus behind the development of a similar approach to the design and construction of complex buildings. Deepak's vision has led Aditazz to develop a SaaS (software as a service) Platform that applies automation and computation to radically improve the efficiency of planning, design, construction, and operation of the built environment.

Over the course of his career, Deepak has developed a wide range of skills ranging from high-level planning, design, and advanced manufacturing to market development, customer support, and general management. He spent seven years at Intel Corporation as part of the Architecture and Design team of several generations of microprocessors. Following Intel, he was part of the early startup team at Yago Systems later acquired by Cabletron Systems. Through his career, Deepak has participated in the creation of several successful leading-edge products that have had a positive impact globally.

Deepak has a Master's degree in Electrical and Computer Engineering from Arizona State University and a Bachelor's degree in Electrical Engineering from Bangalore University in India. He currently holds eleven patents.
